- Hepatitis A Hepatitis B B:
 - G: Yellow fever Japanese encephalitis J:
- Diphtheria
- M: Meningococcus A+C
- Meningococcus A+C+W135+Y SSME/TBE M*
- Rabies r:
- Tuberculosis T: Typhoid fever
- Mosquito bite prophylaxis

Depending on the nature of the journey, the recommendations are divided into four categories, which roughly correspond to the following:

- **1**. Business or conference travel of some days' duration to capital or other big city. Grp 1 can be supplemented from Grp 2, e.g. with A.
- 2. Package holiday of up to four weeks' duration with day excursions. If the journey is of a special nature, for instance with intense exposure to risk of infection, **Grp 2** can be supplemented from Grp 3, e.g. with J on insect exposure (trekking expedition), T in the event of extremely poor hygiene (trip to disaster area), M and/or D for close local personal contact.
- 3. Individual travel of some months' duration, e.g. rucksack expedition and immigrants visiting family.
- **4.** Prolonged individual journey for six months or more, persons stationed abroad or similar, frequently repeated visits.

NB: Cover will often need to be adapted to individual needs. On travel to border areas, vaccination recommendations for neighbouring countries may be included. Recommendations must be weighed against possible contraindications.

Typography of the symbols Malaria prophylaxis is emphasised in **bold type** and is placed last in each column. CAPITAL **LETTERS** are used when the recommendation applies to all travellers, <u>small letters</u> when the application is limited: thus, f, r, s refer to vaccination of selected travellers, and \mathbf{v} , \mathbf{q} , \mathbf{u} , \mathbf{x} , \mathbf{z} refer to risk of malaria in a minor part of the country. Seasonal variations are stated in numbers. When the risk is seasonal, usually the rainy season, the first and last month of the relevant period are stated at the top and bottom after the letter, respectively, e.g. Afghanistan \mathbf{U}_{11}^{5} . Note that the rainy season may vary from year to year, and that the numbers are therefore only a guideline.

- Chloroquine O
- Chloroquine + proguanil U:
- Mefloqui-
- Doxycycline/Malarone

- Hepatitis A G: Yellow fever
- B: Hepatitis B J: Japanese encephalitis
- D Diphtheria f: SSME/TBE
- M: Meningococcus A+C M* Meningococcus A+C+W135+Y
- r: Rabies
- s: Tuberculosis
- $\begin{array}{ll} T \colon & \text{Typhoid fever} \\ \textbf{V} & \text{Mosquito bite prophylaxis} \end{array}$

Key to symbols

- A: Hepatitis A (Vaccination is suggested from 1 year and recommended from 10 years. Immunglobulin can be given to pregnant women.)
- **B:** Hepatitis B (from birth).
- D: Diphtheria. All travellers should be vaccinated against both diphtheria and tetanus within the last 10 years (usually given as "Td vaccine for revaccination", EPI-NEWS 40/97 and 7/99).
- f: East European spring-summer meningoencephalitis (SSME/TBE), for regular walking in grassy deciduous woodlands during the six months of summer.
- **G:** Yellow fever (from 9 months).
- **J:** Japanese encephalitis (from 1 year), see EPI-NEWS 3/97 and 50/99.
- **M:** Meningococcal disease A+C (from 2 years).
- **M*** Meningococcal disease A+C+W135+Y (from 2 years).
- r: Rabies, particularly for children and on travelling in remote territory.
- s: Tuberculosis. BCG for unvaccinated children and young people, if there is regular contact with members of the local population who are living in poor circumstances (from birth).
- **T:** Typhoid fever (injection from 2 years, capsules from approximately 5 years).

Malaria prophylaxis:

- V: Very little risk, mosquito bite prophylaxis sufficient.
- **Q:** Chloroquine, alternatively mefloquine or Malarone
- U: Chloroquine + proguanil, alternatively mefloquine or Malarone.
- X: Mefloquine, Malarone or doxycycline, alternatively chloroquine + proguanil
- **Z:** Doxycycline or Malarone.

Basic vaccination of children and people who have not received the common child vaccinations, see EPI-NEWS 50/01.

Vaccination of children before stay in developing countries, see EPI-NEWS 8/00.

- Q Chloroquine
- U: Chloroquine + proguanil
- X: Mefloqui-
- Z: Doxycycline/Malarone
