¹Using EUCAST disk diffusion methodology (https://www.eucast.org/ast_of_bacteria/disk_diffusion_methodology)

²SIR-categorization according to The European Committee on Antimicrobial Susceptibility Testing.

Breakpoint tables for interpretation of MICs and zone diameters. Version 15.0, 2025. <https://www.eucast.org>.

³Categorization into wild type (WT) or non-wild type (NWT) according to available epidemiological cut-off values (ECOFF) available at <https://mic.eucast.org/>

⁴*Acinetobacter* spp. with zone diameter <17 mm will likely be clinically resistant

⁵Inhibition zones are close to the breakpoint, increasing the risk of erroneous SIR categorisation.

⁶Interpretative criteria have not been established
